

ASSESSMENT OF THE WATER QUALITY OF THE LAOAG RIVER BASIN

Felina G. Rosales

Kit Lemuel B. Manriques

Ronie Mhar A. Rojas

Vicente B. Racuya Jr.

The study investigated the physico-chemical characteristic of water samples gathered from three different sites in the Laoag River Basin.

Gathered data showed that Laoag River is not polluted and is still safe for man's consumption.

Moreover, analyses showed that though variations of gathered data exist among the three samples, there is no significant difference in the chemical analyses of the three water samples tested.
